

## DR!FT-Racer

### We have moved racing simulation closer to reality.

DR!FT is the world's first model car that performs with the same driving dynamics as a real race car. Until now miniature model cars behave in a non-realistic way and can be difficult to control, but DR!FT simulates the complete physics of a real race car.

The DR!FT-Racer accelerates and handles 100% like the real thing – on the kitchen table, living room floor, in the office or on your self built racetrack.

„DR!FT is not just a toy:  
DR!FT defines a completely  
new category of gaming“

DR!FT works on any smooth surface and does not require a special race track. A simple office table is all it takes for exciting racing action for one, two or more DR!FT-Racers.

DR!FT is pure motor sports in miniature format and can be played anywhere in the world.

We have developed a model car with a unique drive concept (patent pending) which allows the simulation of understeer, oversteer or drifts, without actually losing contact to the surface.

## DR!FT-Steering wheel and Cockpit

## DR!FT-Setup

## DR!FT-Overview

### PROTOTYPICAL DRIVING BEHAVIOUR

Realistic acceleration, braking, and drifting.

### RACE SIMULATION

The complex driving simulation computes a realistic driving behaviour.

### REAL RACE SOUND

Authentic engine sound, realistic braking and gear shifting sounds.

### DIRECT PROPORTIONAL STEERING

With steering, accelerator, brake and hand brake.

### REALISTIC LIGHTS

Equipped with drive and brake lights.

### ROBOTIC

Modern robotic technology gives the DR!FT-Racer a realistic driving appearance.

### NO CONTROLLER NEEDED

Steer your DR!FT-Racer anytime and anywhere with your smartphone! The DR!FT-App combines controller and complete racing game. Compatible with Android and iOS.

### NO TRACK NEEDED

DR!FT works on most level surfaces. Create your own racetrack using everyday appliances.

### FREE UPDATES

Always up-to-date: Wireless updates for future features!

### BATTERY RUN- AND CHARGING-TIME

30 min driving time / charging 30 min via micro-USB (cable included) Built in LiPo battery.

### SCALE

Size: 1:43  
Speed: 1:43  
Sound: 1:1

### HIGHSPEED BLUETOOTH

Transmission with Bluetooth Smart: Based on the steering input the car's movement is calculated, which then gets transmitted to the DR!FT-Racer. Simultaneously the DR!FT-Racer sends the internal sensor's signals to the app for analysis.

### EMERGENCY FEATURE

Turn the display downwards and the Racer stops immediately! For a safe training.

### VIBRATION FEEDBACK

Signalling maximum steering angle, for even easier control of your racer.

### UNDERBODYSENSOR

The DR!FT-Racer can identify information on the track, like the start and finishing line for example. This makes lap timing possible.

### HANDMADE IN GERMANY

The DR!FT-Racer is built in Germany. His FSC-certified packaging comes from Germany as well.

# DR!FT-Racer

RED TURBO #100501

Color	Europium Rot
Engine	R6 - Twin Turbo
Capacity	3,4 l
Power	565 PS
Torque	570 Nm
Weight	1,6 t
0-100 km/h	3,4 s

SILVER V8 #100502

Color	Dark Titanium Silver
Engine	V8
Capacity	5,2 l
Power	550 PS
Torque	600 Nm
Weight	1,6 t
0-100 km/h	3,3 s

# DR!FT-Accessories

Curbs, Tires, Rims...

Constantly growing range of accessories available in the shop!

Wheel set F-10

Wheel set BBS CH-R

## Let her rip! Brake! Steer! Drift!

Experience real driving physics like those on a real race track - wherever you want.

Get into the first model car which really does behave like its role models, start the realistic-sounding engine and awaken the racing driver within you!

**This is more just than fun - this is a challenge.**
